

## Your Utility Data Collection: Automated. Accurate. Accessible. Secure.

“Spreadsheets are fun, easy to use and the highlight of my day” - said no one ever! Alright I’ll admit spreadsheets have their place but for somethings you have to ask yourself “there’s got to be a better way”. So why not challenge the way you collect your Utility Bill Data. Spreadsheets still have a use, but when it comes to gathering your energy usage, why not try to use a software instead of a spreadsheet. The benefits may surprise you.

- **Greater Visibility.** Spreadsheets can be confusing, inconsistent and inaccurate. With Limbach’s online Dashboard, your data is represented in a fashion that is digestible and easy to understand by everyone from the CFO to the Energy Manager. We know what data is important to you.
- **Data Entry Can Lead to Mistakes.** We are all human, unless you’re a robot...and we all make mistakes. The most common issue we uncover early on in our program is bad data entry which results in benchmarking errors and overpayments to the utility. Our program automatically imports your data into your online dashboard eliminating the human factor. If there are any anomalies, we alert you immediately and work with you to resolve the issue.
- **Data Collection vs Data Analysis.** - Spreadsheets are good for storing data...but then what? You might have an idea of what your average electric bill should be...but do you know how that compares to last months? Or the year before? Are you tracking the daily temperatures to know if you’re using more energy because it’s colder or hotter than previously? Do you know your Site EUI, Energy Star Score, Cost per square foot!?! Whew, figuring out what to do with the data can be tough and time consuming. Our program takes you beyond the utility bill and couples data collection with meaningful analysis and insights.
- **Access your data ANYWHERE.** Unlike spreadsheets, which usually reside on computer harddrives or remote networks, our product stores your data securely on the cloud so you can access it from any internet connection. Even from atop Mt. Fuji...although the view from there might be slightly better than our dashboard...but it’s a close second.
- **We can grow with you.** Using spreadsheets might work if you’re managing a few utilities, but if you have more than one building you could be responsible for dozens of accounts. We have clients who have to manage hundreds! Imagine using spreadsheets for all of those...No Thanks say I. Having a software which automatically collects utility bill data makes it just as easy to review one building as it does hundreds.
- **Save time for other things.** Instead of taking the time to key-in utility bill information you could automate the process and put the time saved to looking at ways to improve the energy performance of your building.
